## Turkish Automotive <br> Industry

April 2009
June 5, 2009

## Production

Accordingly, total automotive production -excluding tractorsreads as 218,112 units, which highlights $54 \%$ annual drop in the first four months of 2009. Figures underline enduring unfavourable market conditions. Comparing April 2009 with a year-ago, automotive production waned by $38 \%$ where 75,545 units of vehicle were manufactured within the month. April production figures hallmark an improvement in comparison with March, where total production bid up by 28\% m-o-m.

## Domestic Retail Sales

Adverse market conditions led automotive sales to keep deescalating annually in the first four months of 2009. OSD posted 154,434 units of retail sales as of 4 M 09 , which exhibits $14 \%$ y-0-y drop. The share of imported vehicles in total sales eventuated as $59.4 \%$, which was $56.2 \%$ in 4 M 08 . passenger cars and light commercial vehicles felt the positive impact of tax incentive most, whereas heavy commercial vehicles did not respond to incentives other segments did. Volkswagen led the retail sales team, which sold 11,564 units of imported passenger cars and LCVs in toto.

## Domestic Factory Sales

Domestic wholesales abated by $35 \%$ to 57,883 units of vehicle in the first four months of 2009 . The drop mainly stemmed from commercial vehicles, which waned by 43\%, whereas domestic factory sales of the passenger car segment fell by $24 \%$.

## Exports

Total exports shrank annually by $17 \%$, slipping from 368,015 to 166,674 units in January-April 2009 period, where both passenger cars and commercial vehicles exports continued to suffer from the slackening foreign trade conditions as the global crisis continues. Passenger cars poses a $46 \%$ slump, whereas commercial vehicle exports declined by $65 \%$ in 4M09.

## Production

The Automotive Manufacturer's Association (OSD) disclosed monthly production and sales figures. Accordingly, total automotive production -excluding tractors- reads as 218,112 units, which highlights $54 \%$ annual drop in the first four months of 2009. Figures underline enduring unfavourable market conditions. Commercial vehicles showed a higher contraction with 64\% compared to the passenger car segment that dived by $45 \%$ in 4 M 09 . Therefore, the 4 M 09 capacity utilization ratio (CUR) emerged as $43 \%$, way below the spectacular $97 \%$ of 4 M 07 .

Comparing April 2009 with a year-ago, automotive production waned by 38\% where 75,545 units of vehicle were manufactured within the month. On y-o-m basis, the passenger car segment was distressed most, where commercial vehicle outturn tumbled by $12 \%$ only. The monthly ratio materialized as 60\%, which was 39-percentage point lower than the level of April 2008.

April production figures hallmark an improvement in comparison with March, where total production bid up by $\mathbf{2 8 \%} \mathbf{m - 0} \mathbf{- m}$. However, we attribute the improvement to the Private Consumption Tax cut decision in light vehicle and passenger car segments. On the other hand, a sharp ebbing continued in heavy commercial vehicles, which declined below the 4M 2004 levels.

Oyak Renault is sturdy in preserving its apostle in the first four months of 2009 by producing 75,191 units, and was pursued by Tofaş with 67,698 units.

## Domestic Retail Sales

Adverse market conditions led automotive sales to keep deescalating annually in the first four months of 2009. OSD posted 154,434 units of retail sales as of 4 M 09 , which exhibits $14 \%$ y-o-y drop. During this period, the decay in locally produced vehicle sales exceeded the fall in imports. Therefore, the share of imported vehicles in total sales eventuated as $59.4 \%$, which was $56.2 \%$ in 4M08.

Activation of deferred demand with the Private Consumption tax cut started in midMarch 2009, and caused April sales to bid up by 7\% compared to April 2008. Locally manufactured and imported vehicle sales performed in tandem, posting y-0-m growths of $8 \%$ and $6 \%$, respectively. Hence, the ratio of imported vehicle sales declined to 53.9\% in April compared to a year ago.

As we mentioned above, the PCT cut bolstered retail sales. The comeback was spectacular relatively speaking, and retail sales diffusively jumped by $79 \%$ compared to March. However, passenger cars and light commercial vehicles felt the positive impact most, whereas heavy commercial vehicles did not respond to incentives other segments did. We think tax cuts can only provide temporary relief unless further and structural measures are taken.

Volkswagen led the retail sales team, which sold 11,564 units of imported passenger cars and LCVs in toto. Ford Otosan followed Volkswagen with 8,335 and Toyota with 6,895 unit sales. The leader in imported LCV sales was Renault with 4,346 units.

## Domestic Factory Sales

Domestic wholesales abated by $\mathbf{3 5 \%}$ to 57,883 units of vehicle in the first four months of 2009. The drop mainly stemmed from commercial vehicles, which waned by $43 \%$, whereas domestic factory sales of the passenger car segment fell by $24 \%$. The nose-dive negative contribution ( $-30 \%$ ) came from the pick-up sub-segment, which declined by $38 \%$, followed by the truck subsegment.

Domestic factory sales displayed a meagre y-0-m growth of 12\% in April 2009, which we can impute to the increase in passenger car wholesales due to 3-monthly automotive sales tax incentives. However, the inadequacy of this stimulus was reverberated in the commercial vehicles figure, where all sub-segments -except pick-up sales- contracted markedly.

Compared to March 2009, on the other hand, domestic wholesales swelled by 92\%. Passenger cars led the drive again there. Passenger car factory sales upsurged by $132 \%$, where the hike in commercial vehicles was confined to $59 \%$ only.

Tofaş led domestic wholesales by a wide margin. Tofaş's sale of 19,542 units in 4M08 was slightly below the sum of Ford Otosan and Oyak Renault's sales (9,242 and 10,754, in turn).

## Exports...

According to Turkish Exporters Association (TIM), the motor vehicles, parts, and accessories sector continued to be the leader with \$19.7bn 12-months trailing exports. The automotive sector accounts for $17.38 \%$ of Turkey's overall exports as of April 2009. The sector is also the export leader in April-only performance, with a share of $16.5 \%$, when exports declined by $51 \%$ in US dollar terms.

Total exports shrank annually by 17\%, slipping from 368,015 to 166,674 units in January-April 2009 period, where both passenger cars and commercial vehicles exports continued to suffer from the slackening foreign trade conditions as the global crisis continues. Passenger cars poses a $46 \%$ slump, whereas commercial vehicle exports declined by $65 \%$ in 4M09.

Considering April figures alone, motor vehicle exports lessened by 51\% compared to the same month of last year, where both passenger car and commercial vehicle segments posted a massive fall. Exports also declined by $10 \%$ compared to a month ago, which confirmed that global recession endures once again.

Oyak-Renault conserved its top-notch position in automotive exports with 60,580 units in the first four months of 2009. Tofaş and Ford Otosan followed the leader with 46,495 and 22,679 units, respectively.

## Economics

## Gündüz Fındıkçıoğlu, PhD, Chief Economist \& Head of Research

There are three episodes of yen appreciation widely attributed to the unwinding of yen carry trades. The most dramatic of these occurred in October 1998, immediately after the LTCM crisis, as many banks were reported to be cutting back on the leverage of their hedge fund clients. Two relatively recent periods that are commonly mentioned as periods of unwinding carry trades are those of May 2006 and February 2007, not to mention the post-Lehman episode. The Japanese real rate was at its 20-years low by the end of 2007. Volatility charts do imply a large swing in both implied and realized volatilities in 1998, but not in 2006 and 2007.

A more systematic way to examine this asymmetry is to correlate the level of volatility with the change in the exchange rate. If yen appreciations are associated with higher volatility than yen depreciations, this correlation should be negative. Chart shows that implied volatility indeed is generally negatively correlated with changes in the dollar-yen exchange rate. However, measured realized volatility has little systematic correlation with the direction of exchange rate changes, perhaps because the skewness in the distribution of exchange rate movements owes to a relatively small number of tail events.

Chart shows risk reversals for dollar-yen and dollar-euro based on the differences in prices between significantly out-of-the-money call options and significantly out-of-the money put options. The risk reversal on dollar-euro is generally close to zero, consistent with a low level of carry trades in this currency pair. The risk reversal on yen was close to zero during the summer of 1998. The 1998 strong downward pressure on the yen was attributed to the carry trade. The price of protection against yen appreciation did not increase until after the yen appreciated sharply in early October, just when

## Economics <br> Gündüz Fındıkçıoğlu, PhD, Chief Economist \& Head of Research

carry trades were supposedly unwinding. Risk reversal widened immediately after the yen appreciations of May 2006 and February 2007, but were not large prior to these dates when carry trades were building up. One interpretation of these results is that risk reversals reflect primarily the changing risk appetites or risk perceptions of market participants rather than changing shares of carry versus non-carry traders. Prices peaked more for protection against yen appreciation than depreciation: that it may be the risk perceptions of the carry traders that are fluctuating most strongly.

Observers noted that in late February 2007, when the yen appreciated sharply, several high-interest-rate currencies depreciated significantly, including the Brazilian real and the New Zealand dollar. Such moves were, and still are, consistent with the unwinding of carry trades. Chart displays rolling 24-month correlations of dollar-yen with dollar-New Zealand dollar and dollar-Brazilian real. The yen has been negatively correlated with these currencies recently, and the correlations also turned negative around October 1998, but the negative correlations around these three episodes are not large either in absolute terms or relative to other periods. As data builds up, we ought to watch similar patterns emerge as the rewinding of carry trades may easily become the front-page story of the months to come.

## Auto, Special Section Gündüz Fındıkçıoğlu, PhD, Chief Economist \& Head of Research

VAT and special consumption tax reductions fuelled car sales in March and April. The rebates began on March 15. At about the same time USD/TL nominal exchange rate had hit 1.823 , the highest level ever. Incentives targeting automotive and consumer durables started 1at almost exactly the same date when the Central Bank of Turkey (CBT) introduced FX sale auctions and intervened somewhat indirectly and mildly in the FX market. As the Lira appreciated, and as tax incentives worked, demand for imported passenger cars soared. The extra component of automotive sales reached 26.000, of which 19.000 were imports. Incentives did not bear on commercial vehicles though, webbing their effects largely through passenger and light vehicles segments. The Automotive Manufacturer's Association (OSD) did not in fact recommend, let alone insist on using tax cuts as propellers of domestic demand. As we do, the OSD thinks the boosted vehicle demand may be short-lived, and demand could be curtailed in H2 2009. Car sales are seasonal, and July is the worst month ordinarily since New Year's models are launched early on in August. Hence, July is the dead season. This year there is the additional disincentive to the effect that tax cuts will end by the end of June. As the demand for cars is not renewable ad infinitum, and comes in discrete intervals, potential demand should in principle have been triggered early on by tax incentives and suchlike, reducing thereby the potential for further booms in H 2 . As everybody knows full well, the US administration had engineered a tax rebate scheme last year, with the effect that Q2 2008 US GDP growth turned out to be positive in an otherwise recessionary environment. However, the momentum was lost almost immediately after tax rebates ended, and in H2 2008 GDP growth rates sort of nose-dived. The same thing could happen here. We should not let pass unnoticed that the major impact came through imports, incentives affecting domestic production much less than imports. The good news is Germany raised its import demand in April by a few notches.

Other than taking macro end micro precautions early on in the general sense, which is by now a bygone opportunity, what else could be done? The car scrapping schemes introduced recently in Western Europe, especially Germany, are a good case in point. Boosting vehicle exports is possibly within the power of the government, it is nonetheless possible to make an arguably noteworthy thesis out of it. In Central Europe especially, such schemes have the potential to raise GDP by 1\%, a non-negligible boost under the current conditions. As in Turkey, a slump in car production was the hallmark of recession in many a European economy, especially in Emerging Europe. In Slovakia, for instance, car exports account for $13 \%$ of GDP, and $30 \%$ drop in such exports claim c. $4 \%$ of GDP already. Car scrapping, details of which lie in the experience of Central Europe mostly, could be a helper although we should neither think of them as genuine takeoff engines in the absence of a global recovery nor as permanent built-in stabilizers. Car scrapping incentives reach EUR2500 in Germany, and EUR1500 and EUR1000 in Austria and France respectively. In Spain such incentives admit an upper bound of EUR10.000, and in Italy EUR5000, with fiscal costs adding up to EUR500 million. Nevertheless, since Turkey utterly lacks such schemes and regulations, it could be worth to give it a try. Otherwise, car prices have already gone up in April and in May, as stocks eroded, and incentives will cease to exist more likely than not next month. In reality, to the extent any incentive causes car purchases to be brought forward, it could actually dampen the recovery one step ahead.

OSD actually believes, as we do, that the recessionary momentum may have eased and neared the bottom, and that automotive production could pick up a bit in Q4 2009. However, it is also high time to look ahead and ensure R\&D and other modernization investments endure in the midst of the crisis. In fact, this has happened to some degree thus far. Economies of scale and scope, skilled and semi-skilled labour force, further R\&D activities, and tax incentives in the continuous time adding up to $10 \%$ of price as in the EU experience are but a few glimpses of enhanced incentives the government could provide the sector with in the future.
